## INNOVATIVE STAIR TREADS

### IMPROVE THE VISIBILITY OF STEP EDGES

ENSURE THE SAFETY AND ACCESSIBILITY  
OF BUILDINGS FOR VISUALLY IMPAIRED PEOPLE.

Choose the new, innovative CARE stair treads with a durable print of stripes in contrasting colours. The offer includes risers as well.

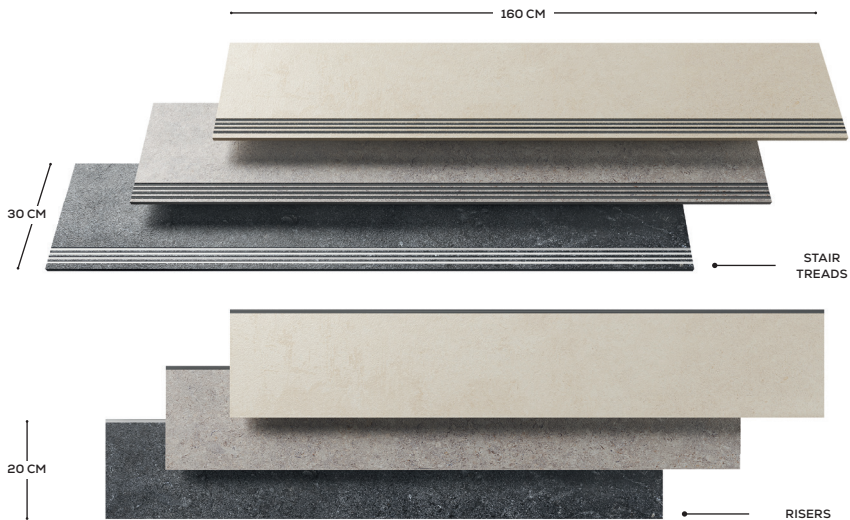

This makes it easier to notice the edge of the stairs, which will minimize the risk of tripping and falling.

**CARE**

# CARE

THIS MODERN PRODUCT, **WITH A LENGTH OF 160 CM**, INCREASES SAFETY AND COMFORT IN PUBLIC FACILITIES.

As a result of using stripes in contrasting colours, the stair treads are easily visible, which significantly facilitates the spatial orientation of users.

## ADVANTAGES OF **CARE** PRINTED STEP TREADS FOR BETTER STEP VISIBILITY.

### Increased visibility:

The print in the form of contrasting stripes makes the stair treads easier to notice, even for people with limited visual acuity. Vibrant colours and distinct patterns help to identify the edge of stairs, minimising the risk of tripping and falling.

### Better spatial orientation:

The stripes on the treads act as visual signals that help with spatial orientation. Visually impaired people can more easily recognise different levels of stairs, which allows them to navigate safely.

### Sense of security:

People with visual problems often feel unsafe in public places where stairs and different levels can be difficult to see. New printed stair treads help them feel more comfortable and confident, which can increase their independence and freedom of movement.

### Usage:

The stair treads are available in a new size of 160 cm. This allows them to be adapted to various types of stairs in public facilities, such as offices, schools, railway stations, airports, shopping centres and other places where the safety and comfort of all users, including the visually impaired, are a priority.

### High quality:

The stair treads are made of high-durability materials that are resistant to wear and tear. This guarantees that prints will remain visible for a long time, which is especially important in high-footfall areas.

### Availability:

The use of printed stair treads complies with applicable standards regarding the accessibility of public places. Their usage assists in meeting legal requirements to ensure safety and accessibility for visually impaired people.

**INTE

FUNDACJI**

Selected **CARE** step treads have been awarded the 'Product without Barriers' certificate by the Integration Foundation, which recognises services and products supporting the social integration of people with disabilities. The certificate confirms that innovative treads eliminate the architectural barriers that stairs used to pose for visually impaired people. It is a symbol of commitment to creating a more accessible and friendly space for everyone, regardless of their physical or sensory abilities.

# CARE

Thanks to their innovative design, these stair treads not only increase safety, but also contribute to creating a more inclusive and accessible public space. It is a step towards a society where everyone, regardless of their abilities, can feel confident and safe.

## THE TUBĄDZIN CARE STEP TREADS MEET THE PROVISIONS OF:

- Technical Conditions, **paragraph 71, point 4** and **paragraph 306, point 2**.
- **ISO 21542:2011** standard.
- the **Act of 19 July 2019, item 1696** on ensuring accessibility for persons with special needs.

Stair treads from the **Tubądzin Group** have the same patterns as the porcelain tile collections. This allows to arrange coherent spaces, both inside and outside buildings. The offer includes stair treads from the **Monolith** collection - with the appearance of stones, minerals and raw concrete, among others, the **Industrio** and **Zimba** coloured body collections.

This is an ideal solution for both internal and external stairs. Stair treads combine aesthetics with durability. They are resistant to weather conditions, moisture, frost and high temperatures, as well as being easy to keep clean.

The **CARE** product range is supplemented by the plinths in contrasting colours designed for walls and floors to ensure proper visibility of passageways in buildings.
